[redacted]

Universal Constants, Variations, and Identities

By Carey G. Butler

Some have asked for more information about my work. Towards that end, I'm going to start publishing my growing list of universal onstants and varian es. It is these onstants and varian es that form the foundation of my work.

[redacted]

There are about as many of them as there are stars in our universe, both primary and derived, so I don't think I'll run out of them! " ost of them are self#e$planatory, but if you have any %uestions, please don't hesitate to ask. The numeri al ordering is not yet important, as I'm still olle ting and ollating them as I dis over or be ome aware of them.

So simple and yet so profound. &e take them for granted or are oblivious to them! They are embedded so deep in the ' niverse that they may even seem silly or humorous to the uninitiated and(or the s epti al.) lease give them time to sink in. Then de ide for yourself if they are to be ignored, re*e ted, or reviled. **It is they which comprise everything we know.**

+ " ore are oming and these are also onstantly being e$panded, so he k ba k again.,

*#1 – **Awareness is primary and fundamental.*** +Substrate,

---

*#2 – **All awareness is non-dual unless it is dual**.* + - uality,

---

*#3 – **There is no inside without an outside nor outside without an inside.*** +Interiority(. $teriority,

---

*#4 – **Duality is bounded, non-duality is boundless.*** +Boundary,

---

*#5 – **Boundaries arise in a spectrum from diffuse to concise.*** +Crossing,

---

*#6 – **Reality is composed of whole parts.*** + / olons,

0rthur 1oestler oined the term 2 / olon' that refers to entities as both wholes and parts of some other whole. https3((en.wikipedia.org(wiki(/ olon4+philosophy,

5or e$ample3 a whole atom is part of a whole mole ule, whi h is part of a whole ell, whi h is part of a whole organism, 6 . a h of these entities are neither a whole or a part7 rather, a whole part or / olon.

"There's a 2000 year old philosophical squabble between atomists and holists: 'Which is ultimately real – the whole or the part?' The answer is neither or both, if you prefer…" **– (Ken Wilber)**
There are only 'whole-parts': *Holons.*

#7 – π is the identity of periodicity. +)eriodi ity(8,

#8 – e ***is the identity of change*** +9(Change,

#9 – θ the identity of proportion +:()roportion,

~~*#10 – All Holons have at least four fundamental capacities.* +)otential,~~ ;;; <.=ISI>? ;;;
#10 – All Holons have at least six fundamental capacities. +)otential,
/ori@ontal +Span,3

#11

[redacted]

#14 – ***Singular and plural arise together.*** +Singular( )lural,

There is no singular without a plural representation e$ ept in the non#dual.

#15 – ***Time is a temporally 'linear' (directed) form of change that is not limited by dimension.*** +Change(Time,

[redacted]

Time has been arbitrarily and wrongly assigned to dimension. Change is not restricted to any dimension: therefore time is also not limited to it.

I know itIs trendy to see time as a dimension, but dimension is something ompletely different. Stay tuned to find out what and why.

There are many reasons why time needs a proper definition. / ere are a few of them3

[redacted]

The hemi al rea tions in the vessel are not really effe ted by some mysterious thing alled time, but by the number of onta ts or ollisions +**events**, that take pla e in the soup of atoms or mole ules. That is what the fa tor ITI really stands for.

A, . ternity may be a somewhat mysti al overar hing reality outside of the physi al universe, but time is not. ? or is time a thing that anybody an do anything to. ***In other words: Time cannot be reified.***

[redacted]

B, ***The universe doesn't exist in time, but time exists in the universe.***

C, The proper definition of time is e$a tly3 ***Time is the sequence of events in the material universe.***

https3((www.youtube. om(wat hJvKL>vltl>0LM.

What about time with respect to knowledge and knowledge representation?

Change **lies deeper in the knowledge substrate than time.**

1 nowledge is not ne essarily oupled with time, but it an be influen ed by it. It an be influen ed by hange of any kind3 not only time.

1 nowledge may e$ist in a moment and vanish. The in ipient perspe tive+s, it ontains may hange. >r the perspe tive+s, that it omprises may resist hange.

Also, knowledge changes with reality and vice versa.

Time (as well as space) requires events to influence this relationship between knowledge and reality. Time and space arise together via events.

1nowledge annot be relied upon to be a more a urate e$pression of reality, whether time is involved or not, be ause **the relationship between knowledge and reality is not necessarily dependent upon time**, nor is there ne essarily a oupling of the relationship between knowledge and reality. The relationships of 2more' and 2a urate' are also not ne essarily oupled with time.

Example: . ratosthenes al ulated the ir umferen e of the . arth long before Coperni us published. The 2 ommon knowledge' of the time +Coperni us knew about . ratosthenes, but the ulture did not, was that the . arth was flat.

#16 – ***Creation and discovery compliment each other and are the means in which the Universe fundamentally unfolds and enfolds itself.*** +Creation(- is overy,

&e tend not to identify them, be ause there
are so many variations in their harmony.
)lease do overestimate your thoughts... as
you will see they are the beginning of your
e$pression to and of the world.

Both Creation and - is overy will work in
unison, if we allow them.
- is overy is to re ogni@e(relate what is in
your world.
Creation is to transform(synthesi@e it too.
Each is alone without the other.

CreationK<ight Ibrain I +rightNmind,
- is overyKEeft Ibrain I +leftNmind,

Their 'magick' (sic.) manifests not when you synchronize them; rather, when you harmonize them.

+)lease take the time to wat h the D minute video.,

#17 – ***Interiority and Exteriority arise together.*** +<epresentation,

5or every interior representation there is always an e$terior representation that ompliments it. 5or

[redacted]

aware of what temporal means7 **Temporal is a derived attribute of much more fundamental concepts, such as: *Sequence* and *Change*.**

P>ne important aveat3 please bear in mind that my little essay here is not a omplete one. The omplete version will ome when I publish my work.Q

The idea of dimension is not at all well understood. The fa t is, s ien e doesnIt really know what dimension is7 rather, only how they may be used! S ien e and te hnology I onsumeI their utility without understanding their ri hness. >therwise they would have larified them for us by now.

Those who may have larified what they are get ignored and(or ridi uled, be ause understanding them re%uires a larger mental Ivo abularyI than)hysi alism, <edu tionism, and >ntology an provide. >ur present s ien e and te hnology is so entren hed in dogma, olle tivism, and spe ial interest, that they no longer fun tion as they on e did. The globalist parasites running our s ien e and te hnology try their best to keep us Ion the farmI by restri ting dimension, like everything else, to the purely physi al. ItIs all they an imagine.

ThatIs why many of us feel an irritation without being able to pla e our finger on it when we get introdu ed to dimension. &e seem to IknowI that something *ust doesnIt IrhymeI with their version.

Time and space may be assigned dimensionality, in a purely physical sense if necessary, *but there are always underlying entities much deeper in meaning involved that are overlooked and/or remain unknown which provide those properties with their meaning.* This is why the more sensitive among us sense something is wrong or that somethingIs missing.

Eet us temporarily divor e ourselves from the standard IspatialI and ItemporalI kinds of Rdimension' for a time and *observe dimension in its* ***essence***.

Definitions are made from them: in fact, dimensions function for definitions just as organs do for the body. In turn, dimension has its own set of IorgansI as well! I will talk about those IorgansI below.

- imension may appear different to us depending upon our own state of mind, level of development, kind of reasoning we hoose, orientation we prefer, e$pe tations we may have,... but down deep...

Everything, even attributes of all kinds involve dimension. &e must also not forget partial dimension su h as fra tals over omple$ domains and other metaphysi al entities like mind and awareness whi h may or may not o upy dimension. Sualia +water is IwetI, angry feels like IthisI, the burden is IheavyI, are also dimensional.

Dimensions are 'compasses' for navigating conceptual landscapes. We *already* think in multiple dimension without even being aware of it! Here's is an example of how that is:
PBT&3 This is simply an *example* to show how dimension an be Ista kedI or a rued. The items below were hosen *arbitrarily* and ould be repla ed by any other aspe ts.Q
T Imagine a point in spa e +we are already at Cd P$,y,@Q, # a tually at this level there are even more dimensions involved, but I will keep this simple for now.
T it moves in spa e and o upies a spe ifi pla e in time +now Dd, Cd N A time dimension
T say it hanges olour at any parti ular time or pla e +Fd,
T let it now grow and shrink in diameter +Gd,

[redacted]

T if it a elerates or slows its movement +Ud,
T if it is rotating +Ld,
T if is broad asting a fre%uen y +Vd,
T what if it is aware of other ob*e ts or not +AWd,
T say it is a tively seeking onta t + onne tion, with other ob*e ts around it +AAd,
T ... +the list may go on and on,

As you can see above, dimensions function like ***aspects*** *to any object of thought.*

Dimensionality becomes much clearer when we free ourselves from the yoke of all that Physicalism, Reductionism, and Ontology.

EetIs now look at some of their IorgansI as mentioned above as well as other properties they have in ommon3

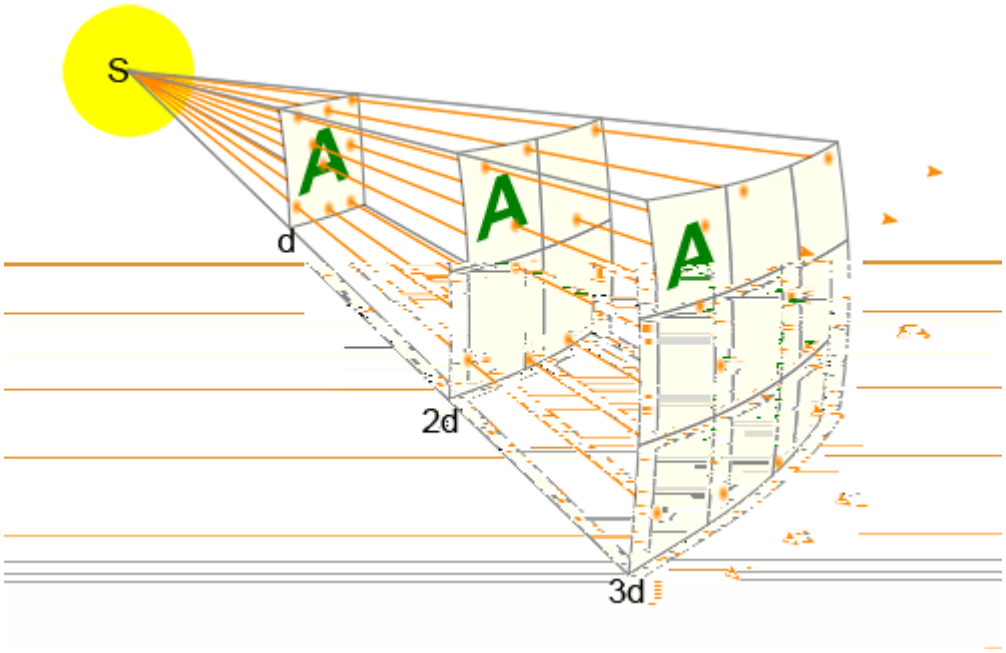
- They pre ede all entities e$ ept awareness.
- 0wareness ongeals into them.
- They form a first distin tion.
- They have e$tent.
- They are integrally distributed.
- They have an a$ial omponent.
- They spin.
- They vibrate.
- They os illate.
- They resonate.
- They may appear as s alar fields.
- Their referen es form fibrations.
- They are IawareI of self(other.
- Their stru tural(dynami (harmoni signature is uni%ue.
- They provide referen e whi h awareness uses to reate perspe tive meaning.
- / olons are built from them.

See http3((mathesis#universalis. om for more information.

[redacted]

#19 The Inverse Awareness Relation.

The **Inverse Awareness Relation** establishes a fundamental relationship in our universe3



Micro Awareness K [redacted]

and

Macro Awareness K [redacted]

or

$$\frac{MicroAwareness}{MacroAwareness} = \frac{depth}{scope}$$

&hi h essentially state3

The closer awareness is in some way to an entity, ***the more depth and the less scope it discerns.***

The farther awareness is in some way to an entity, ***the more scope and the less depth it discerns.***

+Be areful, this idea of loseness is not the same as distan e.,
